

Pushing Changes in Git (Git Bash)

1. Navigate to Project Directory

If your path contains spaces, use quotes:

```
cd "D:/Senior Project/Mallorn version 2"
```

2. Check Repository Status

```
git status
```

3. Stage Changes

Stage all changes:

```
git add .
```

Or stage a specific file:

```
git add file_name
```

4. Commit Changes

```
git commit -m "your commit message"
```

5. Push to Remote Repository

If branch is already tracking remote:

```
git push
```

First push of a branch:

```
git push -u origin branch_name
```
